

## JVA MB1.5 Mains/Battery Energiser

PTE2254

### Overview:

The JVA MB1.5 Mains/Battery Energiser can run on either a 12V battery or 240Vac. The JVA MB1.5 Mains/Battery Energiser is suitable for moderate to large permanent electric fences with a distance of 15km\*, and at 1.5 Joules (peak output energy) it is more than powerful enough for most electric fencing applications.

\*The actual acres or kilometres of fence powered by this energiser depends on your farm fence conditions and therefore varies greatly. The best method to compare energisers is to use peak output energy (Joules).

### Features:

- LED Energiser and fence status indicator
- Large easy to use fence terminals
- O-Ring sealed case for ant and moisture protection
- Lightning protection
- Battery leads with large easy to connect clips
- Front panel On/Off switch
- Easy to mount on wall with 2 screws
- Approved to Australian Safety Standards
- UV stable enclosure

### Specifications:

<b>Output</b>	Peak Voltage:	9 kV
	Peak Energy:	1.5 J
<b>Size</b>	Height:	180 mm
	Width:	155 mm
	Depth:	115 mm
<b>Weight</b>	Product:	1.7 kg
	Packed:	2.0 kg

### Package Contents:

- JVA MB1.5 Mains/Battery Energiser
- Battery leads
- Mains power adapter
- Instructions

### Warranty:

3 Year Manufacturer Warranty (excluding lightning damage)

### For more information:

## Solar Panel Size Table:

The table below shows the solar panel size required to keep a 12V 130Ah SLA battery charged under different solar conditions. The solar panel will need to be capable of charging a 12 volt battery (have a maximum power voltage of approximately 16 volts). A solar regulator such as the Pakton [PTE0032](#) is recommended to protect the battery from over-charging. To use this table, contact your local meteorological authority and find the minimum sun hours per day your area receives. This is usually quoted as the average hours of sun per day in mid winter.

Minimum Sun Hours/Day	4	5	6	≥7
Solar Panel Size	20 Watts	20 Watts	10 Watts	10 Watts
